## Test Planning: More than a Formality

With up to 80% of a product's cost committed in the upstream design stages, Test Planning is critical

Test Planning is the first step to obtaining data that is both relevant and of good quality. This data serves as a baseline to drive simulations along with the insight to predict and measure performance, validate design integrity, and pinpoint areas of concern. As a result, test planning is nothing short of critical to the success of any new or modified product.

Follow the link below to learn how one vehicle manufacturer is benefitting from 6D's test planning experience.

## ENGINEERING ANSWERS through TESTING & ANALYSIS

6D provides answers to mechanical engineering challenges throughout all phases of the product lifecycle. From upstream design validation to field testing, troubleshooting and next generation product development we help our customers achieve measurable and sustained improvements to product innovation, quality, reliability, and performance.
